**Subject:** Re: VPB 154 Grumman - Navy Plume

Stan. That was my point the other day. We deserve the respect of getting the results in a timely fashion not on the BS timeline we are being force fed. But don't worry the ONCT system works 100% and Grumman will one day sign onto doing something in the mean while BWD is removing more mass than the Navy and NGC put together. Your levels are only going to go up when we shut our wells down. We have identified another parcel of land outside the plume and will be replacing another well from down south. By 2017 we will have replaced plants 4,5&6 I would budget now because our last plant cost over 6 million ( covered by public bond ) and in 20-30 years when the study is complete, we will finally know who is responsible for the contamination. I asked Grumman if they ever built any planes in Bethpage and they said NO so I guess that's the truth. Just like they never used perchlorate , 1-4 dioxane or blah blah blah. I guess maybe we will be getting some action after my next 20 million dollar bond hearing. I have already had 3 rate increases and exceed the tax cap like its my job. The total increase has been over 50% in 4 years. This time I will not be nice and the regulators or the politicians. Their silence in this matter has been deafening . But in the meantime we will study some more and withhold sample results from the only people that care what is going on The water districts. When you are free for a few months you should read some of the correspondence from BWD to the DEC and Health dept. It is amazing that in the 1970's we have been criticizing the way this has been handled and to this day there hasn't been ONE request or statement made by BWD that has been false. Rich Humann requested a look see at the ONCT system many years ago because the sample results don't lie and we were told that Grumman was asked and they said it's working fine. I could go on all day but what's the point.  
Good Luck.

Michael J. Boufis  
Superintendent  
Bethpage Water District  
(516) 931-0093
